

$\log_{10} h$
(a)

$\log_{10} h$
(b)

$\log_{10} h$
(c)

q, φ : tri3 FEM; w : meshfree RK. From left to right ($n_{div} = 64/32/16/8$): $n_q = n_\varphi = 4225/1089/289/81$; $n_w = 4096/1024/256/64$ (optimal ratio) or $n_w = n_q$ (1:1:1).

W non-uniform: gmsh random unstructured meshes; DSG3 is displacement-based and has no independent q , so its (c) curve is the raw shear strain $\|\gamma_h\|$.
